Moving Through Life

Finding the Pleasure in Exercise

Sonia Osorio

We're busier than ever with longer workdays, less leisure time, shorter lunch hours, longer commutes, and more demands than ever before. We may even be in a job that doesn't fulfill us, yet we spend most of our time there. When the day ends, we have almost no energy left to do what we enjoy. How to find a healthy balance?

Plenty has been written about the therapeutic benefits of exercise. So, why aren't more people reaping those benefits and moving toward health and well-being? We need to reexamine our notion of what exercise and movement are and consider what we're moving toward or away from. Then we can begin to ask ourselves other questions: Not

reoriented our point of view to notice where the opportunities lie? We can begin by simply redefining exercise (with its sometimes negative connotation of obligation) to movement. Already opportunities arise: How do we want to move in our bodies and in our lives? How can we have fun doing that? How can we move more (or maybe less, if we need to slow down)? How does it feel to be still? How can we make time to move into pleasure, to move with pleasure? Already, the notion of movement takes on a more healing expression. Rather than simply being another item on our to do list, it becomes a way for us to examine our lives, to see where we can move toward health, and use physical activity as a way to support this.

Pleasurable movement is motivating, connects you with your body, and comes in many forms.

just are we fit, but are we physically, emotionally, and spiritually healthy? Are we happy? Do we enjoy how we're moving through life? How can we integrate more healing movement into our days?

Exercise as "Medicine"

We sometimes see more barriers than options to exercise. But what if we

"When most people think of medicine, they visualize something material like a pill to be popped, a liquid to be swallowed, or an injection to be endured," writes Carol Krucoff, author of "Healing Moves: How to Cure, Relieve, and Prevent Common Ailments with Exercise" (Harmony Books, 2000).

"Some might also consider surgery, tests, or procedures ... [But] simple physical activity can have profound healing effects."

Krucoff, who cowrote the book with her husband, Mitchell, a Duke University cardiologist, advocates movement as preventive medicine, saying it's an ideal way to combat the increasing number of inactivity-related health conditions such as heart disease and obesity. This could actually be expanded to include stress-related conditions. In fact, it's often this combination of inactivity and increased stress that wreaks havoc on our immune system, endocrine system, and circulatory system. Every system in our body, in fact, responds to stress and inactivity. But, if this is true, then the inverse is also true: every system in our bodies will also respond to movement and pleasure. To make movement pleasurable and to use it as a way to reconnect with our bodies is, in many ways, the perfect antidote to the cycle of inactivity/hyperactivity and stress. As we move more in this way, we gain energy and health, we feel rejuvenated and relaxed, and we become more physically and emotionally aware.

Emotional Fitness

We often focus on physical fitness, but any movement toward health must also include emotional and spiritual fitness. Psychologist Nancy Mramor, PhD, author of "Spiritual Fitness" (Llewellyn Publications, 2004), ties emotional fitness with our physical health and with our heart's expression. "There is evidence that the largest number of heart attacks occurs on Monday morning between 8 and 9 a.m.," she says. "This occurrence is related to the experience called joyless striving. It applies to feelings of having to force yourself to go to a job that you have no interest in, or even truly dislike. Clearly these feelings suggest a lack of emotional fitness in the match between the employee and the job." When we're emotionally connected to our work in a healthy way and to one another, we not only survive, we thrive.

Personal Health

Interpersonal relationships, in fact, are one of the three major causes of life stress, along with environmental events/conditions and personal attitudes and beliefs. In his book, "Love and

Survival" (Harper Collins, 1998), renowned physician Dean Ornish, who first proved that heart disease was reversible through lifestyle changes, says that in order to survive, we need not only care for our lives, but the lives of others. Individuals with supportive relationships get sick less, heal faster, and live longer.

Our health and well-being are not about being hyper-active or inactive. They're about finding a balance, making our actions conscious, and learning to move in ways that are both healthy and appropriate in our own lives, then moving this healing energy out toward others. So, rather than exhausting or limiting our energy, we learn to expand it. Then we can begin exercising in a whole new way--exercising our right to choose and to better understand our body, our life, and what we want to be doing with it.

Begin by checking in with yourself as you're moving through your day: How does your body feel right now? How are you breathing? Where is this movement taking you? Do you feel good? Are you satisfied? Are you happy? If not, then change something. Change how you're moving, where you're moving toward, or look at what you're moving away from.

"Become the change you seek in the world," Mahatma Ghandi said. This isn't about a temporary quick fix to end a bad habit, lose some weight, or fill our time. This is about long-term change--making more conscious use of our time and of our life. It's about moving through life in healthy and healing ways, and expanding our idea of who we can be. Then our view of the world widens, our heart grows, our spirit soars, and our body moves toward true change. This is the healing power of movement.

Enjoyable exercise boosts physical health as well as emotional well being.

Cultivating a Gardening Habit

Discover the Health Benefits of Yard Work

Feeling the need to exercise, clean up your diet, meditate? Want to be more creative, get out and meet people, enjoy the outdoors, and slow down? There's one activity in which you can accomplish all of these objectives: gardening.

ENCOURAGING EXERCISE

Studies show that vigorous digging burns 500 calories an hour, weeding burns 210 calories, and mowing the lawn burns 400 calories. As a moderate exercise, gardening has been found to decrease the risk of heart disease and diabetes, and a study at the University of Arkansas found that gardening was almost as effective as weight lifting in reducing the risk for osteoporosis in women. So instead of taking that indoor aerobics class this summer, try mowing the lawn or planting an herb garden.

As with any exercise regimen, the key is to start at a comfortable pace and gradually work your way up to longer, more difficult activities. Your heart rate should be about the same as when you

take a brisk walk.

IMPROVING YOUR DIET

Gardening will also likely help you eat better. Research shows that people who grow gardens eat more vegetables and fruits than those who don't. Growing fresh herbs, even in a container on the deck or balcony, is another great way to add flavor and freshness to home-cooked meals and an incentive to try new recipes.

BOOSTING YOUR SOCIAL LIFE

Gardening can also be quite social. Whether at a garden club, a community garden, or an online forum, people love to share ideas, solve common problems, and connect through mutual interests.

EASING STRESS

And finally, gardening is a great way to manage stress. Spending time outside and tuning in to the rhythms of nature, we're reminded to be patient, slow down, and breathe the fresh air. Whether growing flowers, vegetables, or

herbs, a garden reminds us of our connection to life and the abundance that nature so freely gives.

Gardening burns calories and improves diet.

The Sunshine Vitamin

Shelley Burns

In the world of skin health, we focus on ways to improve skin quality. We work to prevent acne, cellular damage, dryness, and wrinkles. It is less common to discuss how a skin-care strategy may increase risk of developing other health conditions.

Skin cancer is one example. To prevent skin cancer, we protect ourselves with sunscreen--especially during the summer months. But by using sunscreen we are blocking the absorption of vitamin D, the "sunshine" vitamin.

Vitamin D is fat soluble and contains powerful antioxidant and anticarcinogenic properties that can prevent premature aging and cellular damage. Solid research indicates that vitamin D plays a role in reducing the risk of cancer, specifically breast, colon,

and prostate cancers. Vitamin D has been associated with preventing diabetes by reducing insulin sensitivity. It also improves heart health, reduces the risk of multiple sclerosis, strengthens bones, and decreases the effects of seasonal affective disorder.

Vitamin D can help resolve skin conditions like psoriasis, as it plays a role in skin cell regulation, including cell turnover and growth. Vitamin D can be effective in reducing the itching and flaking associated with this disorder. Ultraviolet B (UVB) treatments have long been used successfully in treating psoriasis because UVB produces vitamin D in the body.

Getting between 5-10 minutes of direct sun exposure daily on the arms, face, hands, and back (without sunscreen) can

provide enough vitamin D to meet your daily requirements, though sun exposure does present a risk. Because it is difficult to obtain enough vitamin D through food, many prefer to use supplements. Research on the health benefits of ingesting vitamin D led experts to advise an intake of 25-50 micrograms daily.

Shelley Burns is a doctor of naturopathic medicine and completed studies at the Canadian College of Naturopathic Medicine. She has certification in complementary and integrative medicine from Harvard University.

Spring's Rebirth

Hello again and thank you for reading my newsletter. Spring seems to have finally sprung after many, many attempts this year; perseverance pays off once again!

The rebirth of spring also reminds me that I need to birth another newsletter as it has been a while (well, let's be honest - a long while) since my last. A couple of months ago as I considered removing the newsletter section of my website due to inactivity on my part, my inner determined self would not let me follow through, telling me that soon I will be adding to my newsletter collection. Then delegation to less than highest priority caused days to turn into weeks and then months, until this moment when my energies (with the help of mother nature's blissful, warming, and sunny weather) inspire me to make the newsletter happen.

I hope you enjoy the contents and are inspired to make something on your list happen - and I'll give you bonus points if it's something to improve your health and wellness!

Warm regards, Becky
